

deeplinq

AI agents for work that can't leave the building.

deeplinq.com

ENTERPRISE AI DEPLOYED INSIDE YOUR PERIMETER · BANKING-FOCUSED · EMEA-BUILT

DeepLinq is the AI layer for regulated enterprises that cannot send their data to a vendor's cloud. We deploy inside your perimeter, connect to your legacy systems, and put governed AI agents in the hands of every team — banking, insurance, wealth, operations.

DeepLinq is a 2023 spinoff of Brams — inheriting 15+ years of enterprise data and legacy integration expertise across EMEA.

WHAT DEEPLINQ DOES

Ingest

Documents, archives, internal sites turned into source-linked, searchable knowledge.

Connect

Read from and write to your CRM, ERP, core banking, market data. No rip-and-replace.

Orchestrate

Every leading LLM behind one governance layer. Switchable per use case.

Deploy

Agents scoped by desk, team, or compliance context. Live in days.

Govern

Every prompt logged, every answer sourced, every access role-bound.

WHERE DEEPLINQ RUNS

On-premise

Full infrastructure control. Your hardware, your network.

Air-gapped

Zero outbound dependency. For defence-adjacent and classified environments.

Your cloud

AWS, Azure, GCP, or sovereign cloud account. You own the infrastructure.

Managed SaaS

EU-hosted by default. No data leaves the region.

Banking is our flagship vertical.

Banking-first roadmap. Deep regulated-industry expertise. Architected for DORA, MiFID II, FINMA, ACPR.

Use cases deployed across front-, middle-, and back-office: RM briefings, regulatory research, real-time compliance, reconciliation, reporting.

ARCHITECTED FOR

GDPR · EU AI Act · DORA · MiFID II · Solvency II · FINMA · ACPR · ISO 27001 · SOC 2

Additional regional frameworks (including BAM, Gulf financial authorities) supported on request.

In private preview with selected financial institutions across EMEA.
